

# Whizman Software Solutions

## *Software Consulting and Development*

### **Growing Business Data**

Your business stores data that is growing faster than your current computer system can handle. Whizman will implement a system that grows with your business and manages your data effectively.

### **Data – Present & Future**

If your database and application software is becoming obsolete, or is no longer supported, Whizman will migrate your business to an open source solution, which can always be supported.

### **First-Time Computerization**

If you want to computerize your business data for the first time, Whizman provides a solution that takes advantage of powerful, reliable, flexible, secure, and cost-effective open source software.

### **Control Your Own Data**

Avoid vendor lock-in – dependence on any single company. Whizman brings the benefit of open source software, conforming to open standards, to give your business complete control over your own data.

### **Customize Open Source**

If your business is evaluating, or already using, open source software, and you need additional features, Whizman adds the features you need.

### **Software Development**

Contract programming: when your business needs more developers for your programming project, Whizman offers the experience and quality that you seek.

### **Desktop Applications**

Open source applications for all the desktop workstations in your business or home: word processor, spreadsheet, web browser, email client, and more.

### **About Whizman**

*Service*  
—  
*Technology*  
—  
*Value*

Software developer and consultant Randall Whitman has experience programming in languages including C, C++, Java, Perl, and Python; at the MIT Media Lab, Oracle, and DonorWare. Over a decade experience in software development, over a decade experience with open source software, and nearly a decade experience using Linux.
